Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Regarding the Gerard Joulin reference, the Applicant pointed out that Joulin does not disclose a bell connected to means for the suction of air from inside the bell, the bell being supported by movement means for its synchronous movement along the transport section of the conveyor near the entrance of the machine.

Regarding the Kawaguchi et al. reference, the Applicant argued that Kawaguchi et al. does not disclose the "modified atmosphere", because vacuum packaging is not qualified as the "modified atmosphere" packaging.

The examiner acknowledged the arguments and indicated that the validity of the arguments will be considered and examined carefully in the next office action. The examiner also pointed out that any modification to the atmosphere is read as "modified atmosphere", including vacuuming (less than the standard atmosphere). The examiner further indicates that in an apparatus claim, functional recitation is not being given the same weight as the claimed structure limitation.
